

Wipro PBL - Hands-on Assignment

Retrieving Data Using the SQL SELECT Statement

Name: Harsh Soni

Topic: SQL*Plus Commands

Question 1

Determine the structure of the DEPT table and its contents.

SQL Commands:

```
DESC DEPT;  
SELECT * FROM DEPT;
```

Question 2

Determine the structure of the EMP table and its contents.

SQL Commands:

```
DESC EMP;  
SELECT * FROM EMP;
```

Question 3

Display the ENAME and DEPTNO from the EMP table where EMPNO is 7788.

SQL Command:

```
SELECT ENAME, DEPTNO  
FROM EMP  
WHERE EMPNO = 7788;
```

Explanation

DESC displays the table structure including column names, data types, and constraints. SELECT * displays all records in a table. The WHERE clause filters rows so that only the employee with EMPNO = 7788 is returned, and only the ENAME and DEPTNO columns are displayed.
